

Global Basemap

Global Basemap is an off-the-shelf product delivering baseline context that enables users to better understand and analyze specific geographies of interest, whether they be state-wide, country-wide, regional, or global. Using complete, high- and mid-resolution, accurate orthorectified imagery coverage and providing continual updates, Global Basemap provides the most relevant imagery basemap available to the market.

Features

- The most accurate and up-to-date imagery available of all 500 million square kilometers of the planet's surface
- Leverages multiple data sources to provide seamless coverage of the Earth's surface with multiple zoom layers
- Meets strict accuracy, currency and aesthetics required for planning, monitoring and tracking change in defined areas of interest to provide highest quality result
- Requires no tasking or traditional order processing, providing immediate off-the-shelf availability of imagery
- Processing, updating and hosting provided entirely by DigitalGlobe
- Hosted and served over a distributed cloud network, allowing access from anywhere in the world
- Tiered subscription options

Benefits

- Provides users a complete imagery layer that enables bundling of project-specific information with other DigitalGlobe products
- GIS application-ready, which eliminates the time and cost associated with tasking and processing satellite imagery
- Easy access available from anywhere in the world
- Minimizing customer hosting and labor costs
- Imagery stays updated with high- and mid-resolution coverage expanding over time in order to provide the most relevant product possible
- Fast, on-demand seamless integration using open standards simplifies existing GIS workflows and accelerates decision making
- Configurable product options offer a range of values which makes GlobalBasemap a truly customizable solution
